EDUCATION

SRM Institute of Science and Technology

Aug 2023 - May 2027

Bachelor of Technology, Computer Science (GPA: 8.65)

- **Coursework:** Object oriented programming and design, Operating System, Java, Database management system, Computer Organisation and Architecture, Data Structure and Algorithm, Design and Analysis of Algorithm

EXPERIENCE

MedicFood | AI/ML & App Dev Intern

May 2025 - Nov 2025

- Designed and deployed scalable REST APIs using Flask, enabling real-time prescription validation against a cloud-hosted drug dataset
- Built a transformer-based NLP system to extract medicine names, dosage, and schedules from handwritten inputs, improving extraction accuracy by 88%+ and reducing manual verification effort by 60%+
- Developed a smart reminder system with caregiver integration and Firebase Cloud Messaging, supporting 1000+ alerts, missed-dose tracking, and refill monitoring workflows

Himitsu Lab | AI Intern

Jan 2026 - May 2026

- Developed AI-driven enterprise automation workflows using React, FastAPI, and LLM-powered orchestration pipelines, automating 70%+ of repetitive operational tasks across multi-stage processes
- Engineered scalable frontend interfaces and asynchronous backend services supporting 6+ intelligent automation agents, reducing workflow execution time by 45%+ and improving real-time task handling efficiency
- Optimized distributed processing pipelines with Dockerized deployments, API integrations, debugging, and testing workflows, improving platform reliability and reducing recurring production issues by 50%+

PROJECTS

Crime Tracer | [Github](#)

- Architected a scalable FastAPI backend implementing RBAC, OAuth2 authentication, Redis rate limiting, and circuit breaker resilience across 8+ REST API modules
- Engineered a scalable legal intelligence pipeline using FAISS vector search and transformer-based embeddings to classify crime complaints across 57 BNS legal sections, achieving 98.57% Micro F1-score
- Engineered a secure evidence pipeline using AWS S3, Firebase Firestore, SHA-256 hashing, and Prometheus monitoring, reducing evidence tampering risk by 95%+ across 7+ workflow states

LexIntellect | [Github](#)

- Built a full-stack legal AI platform integrating contract analysis, automated drafting, and dispute resolution modules using Flask APIs, and a responsive Next.js UI - reducing manual legal workload by 50%
- Designed a scalable NLP-based legal analyzer using fine-tuned InLegalBERT, enabling real-time legal term extraction, loophole detection, and data-driven binary outcome prediction (allowed vs. dismissed) from Indian case summaries
- Implemented a rule-based AI Panchayat system to assist users with simplified legal interpretations and lawyer-connect features enhancing user access to actionable legal guidance and decision support

Gubernator

- Developed a full-stack maritime intelligence platform using FastAPI, React, TypeScript, Redis caching, OAuth2 authentication, and WebSocket pipelines for real-time analytics
- Built distributed voyage optimization pipelines using multi-agent orchestration and Dijkstra-based routing across 3000+ maritime route edges, enabling sub-2s route computation
- Built interactive dashboards and AI-driven workflow features for voyage tracking, risk analysis, and route optimization across 15+ maritime services, reducing external API response latency by 40%+

SKILLS

- **Languages:** Python, C++, HTML, CSS, JavaScript
- **Frameworks & Libraries:** PyTorch, scikit-learn, Flask, FastAPI, NumPy, Pandas, Matplotlib
- **Databases:** MySQL, PostgreSQL
- **Software Development:** REST APIs, Object-Oriented Programming, End-to-End Development, CI/CD, Agile, SDLC-, Microservices
- **Development Tools:** Git, Docker
- **Cloud:** AWS (EC2, S3, Lambda, API Gateway, DynamoDB, Cloudwatch)

ACHIEVEMENTS

- Winner, AI4Bharat AWS Hackathon – Built Content Room, an AI-powered multi-modal content generation platform using AWS services; ranked 1st nationally out of 96,000+ developers across 3,000+ teams
- Runner-up, Hackstorm 36 Hour hackathon – Built Gubernator, a global supply chain risk analytics platform using RL (Conservative Q-Learning), Docker, and Redis to analyze ship routes and voyage data - SRM University, Apr 2026
- Third Prize, SRM Project Expo – Built Milo, an AWS-powered route optimization system - SRM University, Oct 2025
- Runner-up, NWC Expo-Pet Platter, Smart pet feeder using IoT sensors and analytics, -SRM University, Apr 2025
- Winner, Java Project Expo – Built InnerEcho, a cross-platform mental wellness app with mood tracking, journaling, and emotional trend analysis using Flutter & Spring Boot - SRM University, Nov 2024

LEADERSHIP

ACM SIGAPP SRM | Technical Head

Jun 2025 - May 2026

- Lead a 35+ member technical team; organized events including an AI Escape Room (100+ participants), mentored 4+ live projects, and recognized as the Best Technical Team on campus

CERTIFICATION

- Oracle Cloud Infrastructure Generative AI Professional: Oracle, 2024
